IDENTIFIERS	*Educational Indicators; Indicators; *Wisconsin

ABSTRACT

This WisKids Count data book provides a statistical portrait of K-12 education in the state of Wisconsin. The introduction to the data book examines financing of education, including special education, and the issue of financing private education with public dollars; barriers to school success, including mobility and racial disparities; what works, including quality teachers and quality early child care and education; and the theory practice relationship of implementing what works. The data book then lists school districts by county and provides demographic and education indicator data for the state as a whole. The demographic indicators are: number of children, median household income, percent of single-parent families, percent of all births to mothers under age 20, child abuse and neglect substantiations, percent of children meeting immunization requirements, food stamp participation, and juvenile arrests. The educational indicators, comparing 1993/1994 and 1999/2000 data, are as follows: (1) enrollment by race/ethnicity; (2) instructional cost per pupil; (3) total cost per student; (4) property tax levy per pupil; (5) state aid per student; (6) starting teacher salary; (7) students in special education; (8) students eligible for free/reduced lunch; (9) school breakfast participation; (10) students in private school; and (11) students home schooled. Standardized test scores for grades 3, 4, 8, and 10 are also listed for reading, mathematics and science; high school ACT scores are also posted. The bulk of the data book then presents the demographic and educational data for each county and school district. Finally, data are presented, by county, for selected social indicators, including fair market rents and wages needed to meet them; births to single women; teen births; infant mortality; kinship foster care;

A Letter from the Executive Director

October 2001

In this season of tragedy in our community of the United States of America, this book is published in remembrance of the thousands of children who have lost a parent, a friend, or a person who helped to define their lives. It is fitting that our focus is on education. An educated population remains one of the best defenses against threats to our liberty.

At the same time, a population informed about the differences, internationally, among cultures, peoples, and nations may be more able to preserve the peace. Such is the challenge for public schools.

> A population informed about the differences, internationally, among cultures, peoples, and nations may be more able to preserve the peace.
>
> Such is the challenge for public schools.

K-12 Education in Wisconsin

For years Wisconsin has set the standard for success in public education. Our graduates rank first on ACT tests and among the best on SATs as more students opt to take the tests each year. Sixty-eight percent of our class of 2000 planned to go on to postsecondary education. We have fewer dropouts and fewer young people who are neither in school nor employed. There are other benchmarks of excellence, too numerous to discuss here.

Today, the greater challenges are to preserve and improve an outstanding system. We cannot afford the luxury of complacency when our quality of life, our economy, and our liberty are so dependent on an educated population.

None of the 426 school districts is immune to the challenges that lie ahead. No school district is an island in this discussion. Decisions made in Madison about funding for Milwaukee affect children in Superior and Darlington, perhaps just as profoundly as the youngsters in Milwaukee.

Challenges – from demographics, to dollars, to policies, to pre-school.

Wisconsin's changing demographics bring new challenges. We become more culturally and ethnically diverse every year. With the new diversity of our K-12 population comes a new demand on system resources. There is new meaning to the phrase, "all children will succeed." Many of our newest students are from low-income families. The impact of child poverty upon school achievement is addressed in the Introduction. At the same time, school districts face the drumbeat of high expectations. They must demonstrate outcomes through testing, while they struggle to meet the extraordinary needs of a changing population - needs that we never imagined when Wisconsin's school population was more homogeneous.

An aging population contributes to dwindling support for schools. The share of Wisconsin adults who have children in school has declined dramatically. Elderly citizens living on fixed incomes may be reluctant or unable to support increases in property taxes to support public schools.

A diverse population requires new strategies and resources. Sometimes the financial resources make the difference in implementing successful new strategies. One of the most successful strategies this state has adopted is the SAGE program, also discussed in the Introduction. Smaller class sizes in the lower grades do make a difference, particularly for low-income children or children from another culture. The positive results have been quantified. We know it works. The legislature and Governor Scott McCallum must be credited for supporting this program, but they will continue to need public support and tax dollars to keep it going.

Unfortunately, the broader financial picture for Wisconsin's public schools is increasingly bleak. The "two-thirds solution" is proving to be less-and-less of a "solution" for many districts. As enrollments decline and costs increase at a rate that is often greater than the rate of inflation, school districts are being squeezed by the revenue caps. And a reluctant public cannot be counted on to pass referendums that allow spending above the cap. At a time when districts need expert teachers who can deal with the demands of a changing population, districts are constrained by the revenue caps - they cannot offer teachers salaries that are concomitant with experience and expectations. In addition, enrollments in special education and English-as-a-Second-Language or bilingual programs are increasing significantly, but federal and state support for these programs has not increased proportionately. Financially-strapped school districts are forced to choose between regular education and special needs programs. However, many of the latter are mandated programs, which removes any element of choice.

A Letter from the Executive Director

State funds for religious private schools as well as secular private schools in Milwaukee is controversial. As other states have rejected referendums to allow state tax dollars to be used for private schools, Wisconsin carries on with its program. Some modification occurred this year when the requirement that all school districts financially support the Milwaukee Choice program was repealed. Other attempts to repeal the entire program failed, so children are still attending schools that are supported by the state, but are not required to meet public school standards for health, safety, and education.

Finally, sometime soon we are going to have to seriously consider all aspects of early childhood education. It is the new frontier of education, just as kindergarten and universal education once were. It is no longer simply a question of a daycare being safe. The research on brain development of young children has provided an entirely new landscape for thinking about how we nurture, protect, and educate babies, toddlers, and young children. We can no longer afford to turn them over to untrained, uneducated, and poorly paid workers - not if we expect our children to be ready to achieve in school

Our public schools are a strong public institution in Wisconsin, something we have good reason to crow about. A system of local control and state support has not failed us. The terrible events of September 11 must strengthen our resolve to have confidence in this basic institution, to improve and support it for all of our children. It is a time to hold fast to our belief in the value and promise of education.

The following words of Hodding Carter Jr. describe for me what public education in Wisconsin is all about. It is a motto that could be adopted by every school in our state - a motto for all seasons.

> ***"There are two lasting bequests we can give our children. One is roots, the other is wings."***

Anne Arnesen
Executive Director

> **There was a proposition in a township there to discontinue public schools because they were too expensive. An old farmer spoke up and said if they stopped the schools they would not save anything, because every time a school was closed a jail had to be built. It's like feeding a dog on his own tail. He'll never get fat. I believe it is better to support schools than jails.**
>

Annual Percentage Increases in State GPR Support for Schools and Department of Corrections

SOURCE: Legislative Fiscal Bureau

One measure of the state's priorities is where public dollars are spent. The chart shows the percentage increase in state spending on corrections and K - 12 education.

Financing K-12 Public Education

In the 4th Century BC, the Greek philosopher Aristotle noted that education was both a right and an obligation of citizenship, because without it, democracy itself could flounder. To that end he stressed that "Education must be one and the same for all, and the responsibility must be a public one."

In Wisconsin, the state, on average, reimburses school districts for two-thirds of school costs. However, with the state commitment for two-thirds funding have come restrictions on the growth of school districts' expenditures. These cost controls (see side bar) have had a serious effect on many districts' ability to meet their obligations to students and, in turn, to the community.

Costs of textbooks, health insurance, utilities and wages have increased much faster than the revenue limit has increased. As a result, almost half of the school districts in the state reported that to meet their 1999-2000 budgets they had to eliminate or reduce extracurricular programs, gifted and talented programs, art and music programs, counseling and/or other student services. Over 60 percent reported making cuts in textbook and curricular materials, computers, staff development, supplies, and buildings and grounds maintenance.[1] By 2000, over 80 percent of the state's school districts were operating under a revenue limit that was lower than the federal education inflation index.

In fall 2000, at forums around the state, sponsored by the Citizens Task Force on Revenue Limits, parents, students, administrators, teachers and school board members related stories of discontinued programs and crumbling buildings.[2] According to testimony given at local forums:

- In Appleton, the school librarian can't order a single book, video or book stickers because the budget for the library is zero.
- In New Berlin, woodshop, auto mechanics, metal shop, home economics, and general business classes are nearly extinct.
- A teacher in Appleton has to cover his computer every night because the school roof leaks when it rains.
- In Superior, 2000-2001 summer school was reduced and fifth grade band was eliminated.
- A student in Superior noted that her German textbook still referred to the Berlin Wall. Students in other districts described using 20-year-old books and materials.

Revenue Caps - Wisconsin Statute 121.90 places a per student limit on the revenue a school district can receive from general state aid and local levies. This limit is based on the district's previous year revenue base plus an "allowable per member increase" determined by the legislature. In 2000-2001, the allowable increase was $220. School districts can exceed this limit through public referendum. Prior to 1993, local elected school boards determined local spending on public schools.

Qualified Economic Offer (QEO) - Annual teacher compensation, including salaries and benefits, cannot increase by more that 3.8% annually, unless the school board and teacher's union agree to a larger increase. Teachers cannot request binding arbitration on economic issues if the district makes a qualified economic offer.

Two-Thirds Funding - Beginning in 1996-97, Wisconsin combined an increase in state aid and property tax credits to meet a commitment to provide two-thirds of the funding of education statewide. In the 1999-2000 school year, the state provided about 54% of school costs and 12.7% in direct property tax credits totaling 66.7%.

Because the cap is based on a per student amount, districts with falling student enrollment experience negative consequences. When the limits were imposed in 1993-94, only one-fifth of the state's districts had declining enrollments. By 2000, more than half were experiencing reductions.[3] The Palmyra-Eagle Area School District has experienced this problem and reports that over the past three years funding has been inadequate to meet the needs of its students in art, music, band, theatre, and a number of other classes offered at the junior high and high school level. The district has taken their case to the voters six times and lost each time. As a result, the 2000-2001 school district budget increased class size and cut funding for library aid, building maintenance, industrial arts, the high school agriculture program, and supplies - a total of $371,000.

A provision implemented in the 1998-1999 school year softens the revenue cap penalty for school districts with falling enrollment. (see box) However, this is a non-recurring adjustment; it offers little relief from the long-term consequences of declining enrollment.

> Beginning in the 1998-1999 school year, the state has provided some short-term cap relief to declining enrollment districts. If a district has a three-year rolling enrollment average that is less than the prior three-year average, the district receives a one-time adjustment to its revenue limit equal to 75 percent of what the decline in the revenue limit would have been. For example, Ashland School district had a three-year average decline of 38 students in 1999-2000. The declining enrollment exemption is based on 75 percent of 38 students, or 29 times Ashland's per student revenue of $7,121. This adjustment reduces the drop in the total revenue limit by about $206,500, compared to what it would have been otherwise. However, the base revenue amount used as the starting point for future years is not adjusted, and declining enrollment will reduce that base by about $270,600.

Not surprisingly, revenue caps were a topic of debate during deliberations on the 2001-03 budget bill. Ultimately, the budget Conference Committee developed a compromise measure that would have allowed school districts to exceed state-imposed revenue caps by 0.78 percent, if approved by two-thirds of the local school board. This was expected to increase total school spending by roughly $67 million statewide and the state's two-thirds share by $45 million. However, the Governor vetoed that portion of the budget.

The only revenue cap relief remaining in the new budget bill, Act 16, is a provision raising the per member ceiling for low spending districts. This provision will primarily affect three districts in Wisconsin - Laona, South Shore and Winter.

Special Education

Funding to provide education for children with special needs comes from categorical aids, which are separate from the equalization aids to school districts for regular education. The Individuals with Disabilities Act (IDEA) requires school districts to provide a free and appropriate education to all students with disabilities. As a result of the federal law and a significant shift in philosophy that encourages educating children with disabilities with their peers, the number of children eligible for special education has increased steadily since 1975. Since the 1993-94 school year, the percentage of students in special education programs has increased in all but seven of Wisconsin's 426 school districts - a total increase of more than 22 percent statewide.

The largest growth in children participating in special education has come in the children identified as having Learning Disabilities (LD), which grew from 28,744 in 1993 to 52,647 in 2000 - a 42 percent increase. Children with cognitive disabilities (CD) have increased 66 percent from 4,512 in 1993 to 13,419 in the 2000-2001 school year, and children with emotional disabilities (ED) have climbed by 23 percent (from 12,720 to 16,512). State and federal funds for special education have not kept pace with this growth. Since districts cannot levy for additional funds without a referendum, this imbalance has led many school districts in Wisconsin to use existing dollars for special education rather than for regular education to fulfill their commitment under federal law.

In the 1970's, the Legislature created a categorical appropriation for special education and funded it for many years at 70 percent of a district's costs. This rate was lowered to 63 percent in 1983, and subsequent budgets consistently fell short of that target. 1999 WI Act 9 removed the statutory language that contained the 63 percent target. The state currently reimburses school districts for the cost of special education at 35.7 percent, making Wisconsin's reimbursement rate one of the lowest in the country. The 2001-2003 biennial budget contains no increase in funding for special education. Compounding the funding shortage is the failure of federal dollars to keep pace with increasing enrollment. Wisconsin receives less than 10 percent of the cost to educate special needs students from federal funds, although federal law sets a target of 40 percent reimbursement.

Private Schools - Public Dollars

Wisconsin was the first state to experiment with publicly funded school vouchers. In 1991, the legislature launched the Milwaukee Parental School Choice Program, granting $2,500 vouchers, by lottery, to low-income families to be used in secular private schools. In the first few years, the program grew slowly in both the number of schools and families participating.

To qualify for the Milwaukee Parental Choice Program, a child must meet three enrollment criteria:

1) S/he must reside in Milwaukee.
2) Be a member of a family whose total income does not exceed 175% of the federal poverty level ($29,335 for a family of four in the 1999-2000 school year).
3) In the year before entering the program s/he must have been enrolled in the MPCP program or in a Milwaukee Public School; enrolled in kindergarten, first, second or third grade in a Milwaukee private school: or not enrolled in school.

In 1995, the legislature commissioned John Witte of the University of Wisconsin to study the outcomes for students who were receiving vouchers. Professor Witte found that, generally, voucher students did no better in math and reading than students of similar economic, racial and ethnic backgrounds in Milwaukee public schools. However, in 1997, the legislature expanded the program to 15,999 low-income students and included students in religious schools (an expansion that was upheld by the Wisconsin Supreme Court). With this change, approximately 8,000 students (one-third of whom were already in private schools) were granted vouchers worth Milwaukee's per pupil spending.[4]

The Milwaukee Parental Choice Program has diverted nearly a hundred million dollars of public school funds into private schools. Although funded by taxpayer dollars, choice schools are:

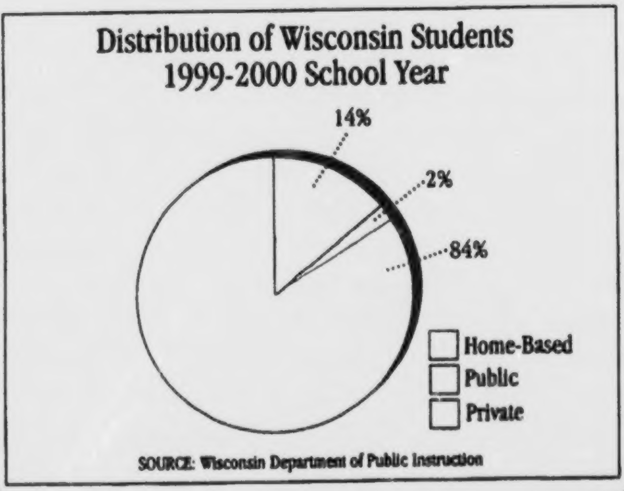
- Not required to provide special education programs for students with special needs, as specified in their Individual Education Plans. These programs are required of public school districts by federal law.
- Not required to hire Wisconsin certified teachers.
- Not subject to the state's open meetings/open records law.
- Not required to participate in standardized testing and report student outcomes.

A report by the Economic Policy Institute estimated that by the 2001-2002 school year nearly 10,000 children would use vouchers to attend primarily religious private schools - a shift of over eight percent of Milwaukee's school population from public to private schools.[5] Statewide enrollment in private schools decreased slightly from 14.9 percent in 1993/1994 to 14.2 percent of the student population in 1999/2000.(see box on private schools in Wisconsin)

An October 2001 study by the federal General Accounting Office (GAO) found no proof that giving students vouchers to attend private or parochial schools improved their performance. The report looked at previous research about the Cleveland and Milwaukee voucher programs. The GAO noted that the Milwaukee program has not been studied in the past five years. During this time, the program has seen substantial growth. In the 2001-03 biennial budget, the legislature and the Governor failed, once again, to include an evaluation for the Milwaukee School Choice voucher program.

Non-public schools

- During the 1999-2000 school year, 14.2% of Wisconsin children attended 1,053 private schools, including religious, charter, and non-sectarian schools throughout the state. The largest block of children (90%) attended religious schools.
- Statewide, 18.3% of non-public school students qualify for free/reduced lunch. In Milwaukee schools, 43% of students qualify. (26.4% of public school attendees statewide were eligible in 1999-2000, 74.4% of students in Milwaukee public schools qualify for Free or Reduced Lunch.)
- In 2001, 132 private elementary schools administered the same third grade reading test given to public school third graders.
- In 2001, four of the five Catholic Dioceses in Wisconsin and the Wisconsin District of the Lutheran Church – Missouri Synod administered the Iowa Basic Skills Test in approximately 330 schools across the state. [Currently, it is not known how many schools used other standardized tests to evaluate their students. The Wisconsin Council on Religious and Independent Schools, which represents just under 700 K-12 schools (approximately 130,000 students) is attempting to collect data from their members about the administration of standardized tests.]



Distribution of Wisconsin Students
1999-2000 School Year

SOURCE: Wisconsin Department of Public Instruction

Introduction

A political hot button, school choice was funded until the 2001-2003 budget with assessments from all Wisconsin school districts. In 2001, the legislature changed the method for financing choice schools by removing this "contribution" from all other school districts and allowing Milwaukee to fund vouchers outside of the revenue cap by increasing property taxes. To date no decision to use this option has been made by Milwaukee Public Schools.

Barriers to School Success

Poverty

Richard Rothstein of the *New York Times* suggested in a March 2001 column, that if children from low-income families continue to score behind their peers on standardized tests perhaps the way to increase school achievement is to reduce poverty.[6] Poverty may well be the underestimated culprit that inhibits many children from succeeding in school. A University of Michigan study found that poverty leaves measurable scars on five-year old children's intelligence and behavior.[7] According to researchers, "Family income is a far more powerful correlate of a child's IQ at age five than maternal education, ethnicity, and growing up in a single family." The study found that the effects of poverty are cumulative, the longer children are exposed to poverty, the more cognitive damage it does. Therefore, it is not surprising that children from low-income families are less likely to be ready for school. A number of studies have found children's home environment - opportunities for learning, warmth of mother-child interaction, and the physical condition of the home - account for a substantial portion of the effects of family income on cognitive outcomes for children.[8] Children from low-income families are less likely to have gained early literacy skills from their families and to have participated in quality preschool programs.

Children from low-income families are at greater risk of a number of health-related problems that often predict poor academic performance, including lead poisoning from older housing stock - often the only choice for families on a tight budget. In the U.S., children from poor families are eight times more likely to be poisoned than those from higher income families. African-American children are five times more likely to be poisoned than white children. Nationwide, about 22 percent of African-American children living in older housing are lead poisoned - a staggering statistic. Last year, in Wisconsin 5.6 percent of children who were tested had high levels of lead in their blood stream. Lead poisoning is an entirely preventable cause of brain damage in children. Low-level lead exposure can cause reduced IQ and attention span, hyperactivity, impaired growth, reading and learning disabilities, hearing loss, insomnia, and a range of other health, intellectual, and behavioral problems. At these low, but still dangerous levels, lead poisoning may not present identifiable symptoms and a blood test is the only way to know if a child is poisoned.[9]

Children living below poverty are more likely to contract asthma, the leading cause of childhood disability. Seven percent of children from low-income families have asthma versus five percent of children living above poverty.

Teenagers whose parents are low-income are more likely to become pregnant putting them and their own children at a greater risk of continuing poverty and poor health. Children born to teen mothers are ten times more likely to be poor.[10] In Wisconsin, mothers under age 20 are less likely to receive adequate prenatal care (67% compared to 84%) and are more likely to have babies born at low-birth weights. Nationally, in 1999, 83 percent of teen births were to mothers from low-income families. Young women who have children before graduating from high school are less likely to complete school putting them at an extreme disadvantage in the workforce. Teenage fathers are more likely to have limited schooling as well due to delinquent behavior and/or alcohol and drug use. A study of fathers of children born to teenage mothers found that they earned an average of $3,400 less per year, then did fathers of children born to mothers over 20 years old.

Homelessness

Children from homeless families face additional obstacles to success in school. Families are the fastest growing segment of the homeless population, accounting for almost 40 percent nationally. Wisconsin schools served 17,000 homeless children and youth in the 1999/2000 school year. The Department of Public Instruction cautions that it is likely that this estimate may be very low. It is difficult to know how many children are homeless and living in doubled-up family situations. Many homeless shelter providers will not disclose information about children, due to concerns about confidentiality.

Children from homeless families exhibit delayed development at four times the average rate, have more academic problems than other children, and are suspended twice as often. They are twice as likely to repeat a grade due to frequent absences from school caused by mobility or illness. Children from homeless families have twice as many ear infections, five times more diarrhea and stomach problems, and are four times more likely to be asthmatic.[11]

Mobility

Research has found a strong correlation between mobility and academic and disciplinary problems in school. Children who change schools frequently may have trouble becoming attached to a new school; each new school may present different school and district standards, new children, teachers and playground rules. Thirty-two percent of U.S. students who were in fourth grade in 1998 had switched schools during the previous two years.[12] Children from low-income families are more likely to change schools. Students in schools with the highest concentrations of poverty changed schools more often than students in schools with the lowest poverty rates. Researchers found that students who moved often had lower attendance rates and that attendance levels were important to achievement. The Kids Mobility Project in Minneapolis found that average reading scores for students who moved three or more times were half those of students who did not move.[13] Many families move often because they cannot secure quality, affordable housing. (The *2000 WisKids Count Book* discusses housing issues at length). In addition, families may be struggling with other threats to family stability such as domestic violence, job loss, death, chemical dependency or divorce. "The results of this residential mobility for students from already-struggling families are multiple - students 'fall behind' academically and socially, forfeit social support systems and sometimes act out their feelings of loss in ways that further isolate them."[14]

Percentage of 8th-Grade Students Who Have Changed Schools More Than Once Since First Grade,
By School Poverty Concentration: 1988

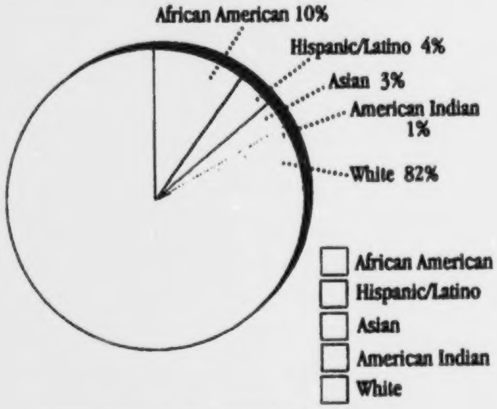
Racial Disparities

In Wisconsin, as well as nationally, children of color face many barriers to academic success. Lower test scores and attendance rates, higher expulsion and dropout rates all suggest that a growing percentage of students are not successful in the traditional system. Children of color are almost three times as likely as their white classmates to live in a low-income household, so the barriers associated with poverty are a significant issue for many children of color.[15] In addition many children face cultural and social differences, language barriers and racism.

Wisconsin School Population – 2000



SOURCE: Wisconsin Department of Public Instruction

Based on the research from the University of Michigan reported earlier in this Introduction, poverty remains the greatest barrier to educational success for many Wisconsin children of color. The most reliable Wisconsin statistics still harken back to the 1990 census (until data from the 2000 census becomes available). That data shocked the state because, compared to other states, Wisconsin had among the very worst poverty rates for Asian and African American children. The Asian child poverty rate was the highest in the country, 48.1 percent; the African American rate was 54.1 percent - a rate exceeded only by Louisiana - and Wisconsin was worst among the states for poverty among African American children under age five. For the cities with the three largest school districts, Milwaukee, Madison, and Racine, the statistics were equally as startling. High expectations and a challenging curriculum can overcome some of the barriers. Helping these children achieve at a high level often takes extraordinary focus and resources from the local school district, as illustrated by the success in the Madison Metropolitan School District (see page 18).

Students from low-income families and minority children participate less often in academically challenging programs. In 2000-2001, less then seven percent of the students taking the advanced placement exams were minority students, while students of color constitute 12 percent of the state's high school seniors. Although two thirds of graduating high school seniors took the ACT in 2001, only eight percent were children of color. Of students who took the ACT, 53 percent of African American students had taken the recommended college preparatory core curriculum, while 64 percent of their white peers had taken the prep courses.[17]

An important key to quality education is a knowledgeable teacher. In Wisconsin, teachers lacking a major or minor in the field taught 25 percent of high school classes in high minority schools, compared to 16 percent in schools with few minorities.[18] As discussed earlier, inadequate resources can have a detrimental effect on the quality of education that students receive. In the 1999-2000 school year, Wisconsin school districts with the highest minority enrollments had $531 less to spend per student compared with the lowest minority districts.

Changes in housing patterns in Wisconsin metropolitan areas have produced greater school segregation. 2000 census data indicates that Milwaukee, where many of the African American children in Wisconsin live, is one of the most racially segregated cities in the country. A study by Harvard University shows that Milwaukee is the eleventh most segregated school district for African American and white children. Racial segregation affects minority student achievement in a number of critical ways. Highly segregated minority schools are many times more likely than majority white schools to experience concentrations of poverty. Less segregated schools are more likely to:

1) draw and hold strong teachers who are teaching in their subject,

2) provide more accelerated and fewer remedial programs,

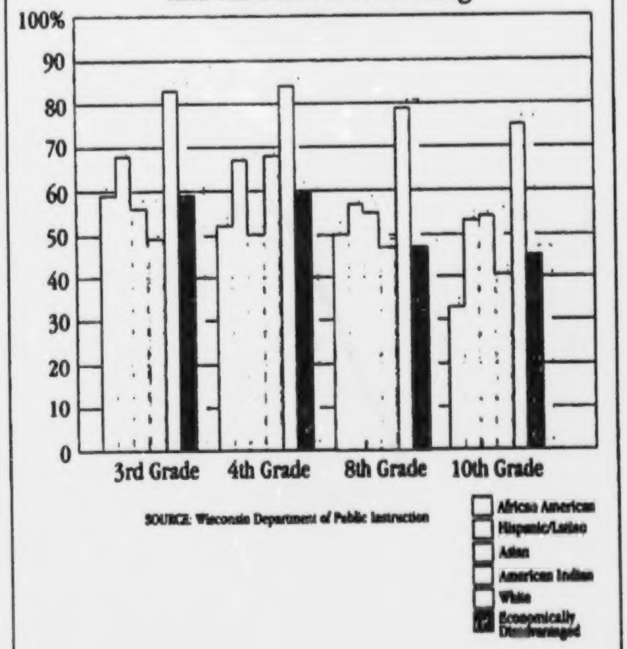
3) have fewer personal and community problems to deal with,

4) have the most active involvement by parents, and

5) have strong relationships with colleges.[19]

In Wisconsin, students in third, fourth, eighth and tenth grades take standardized tests for the purpose of measuring student achievement. According to the Wisconsin Department of Public Instruction, one of the most significant findings in the test scores is that the achievement gap is smaller in third grade, but increases as students progress through school. In 2001, 59 percent of African American third graders scored at the proficient or advanced level in reading compared to 84 percent of their white classmates. But in eighth grade only 35 percent were proficient or advanced versus 79 percent of white classmates. Some of this difference may be explained by the fact that children in eighth grade in 2001 have not had the benefit of recent class size reduction programs that have greatly benefited children in fourth grade this year. In addition, by the time many children of color are in eighth grade they have moved to several different schools.

Students Scoring Proficient and Advanced in Reading



SOURCE: Wisconsin Department of Public Instruction

What works?

Parental Involvement

Children whose families are involved in their education have higher grades and test scores, better attendance, graduation rates and greater enrollment in higher education.[20] The benefits of parental involvement extend well beyond the elementary school years. For middle school and high school students there is a strong relationship between parental involvement and enrollment in higher-level college preparatory courses. Data from the National Assessment of Education Progress suggest that parents can affect three factors. These factors account for nearly 90 percent of the difference in the average state-by-state performance of eighth-graders as measured by test scores. They are: student absenteeism, variety of reading materials at home, and excessive television watching.[21]

Reading and telling stories to young children can help them develop cognitive and literacy skills as well as develop skills needed to succeed in school later on. Nationally, from 1993 to 1999 the percent of families that reported reading, telling stories or singing to their children at least three times per week increased 78 percent. However, this increase occurred largely among white, English speaking, two parent families with incomes above poverty.[22] The Urban Institute's American Families Survey found that in Wisconsin 13 percent of children ages one to five live with parents who read or told them stories fewer than three days per week. For low-income families this figure was twice that of non low-income families (19 versus 9).

Quality Teachers

Nationally, as of 1998, the highest poverty schools and schools with the highest concentration of minority students had nearly double the proportion of inexperienced teachers (those with three or fewer years of experience). Fortunately, individual teacher's skills and effectiveness do improve with continuing education. However, in Wisconsin, during the 1999-2000 school year, 60.2 percent of school districts cut professional development for teachers due to fiscal constraints caused by the revenue limits.[23]

The problem of attracting - and retaining - qualified prospects is especially acute in the fields of math and science, where recent college graduates can easily command two to three times the salary of a starting teacher. In Wisconsin, like the rest of the nation, the teacher shortage is most acute in special education, bilingual education, ESL, science and math. In the 1999-2000 school year, 2,091 emergency licenses were issued in Wisconsin. "Over the last three years, the DPI issued an average of 1,981 emergency licenses annually, up from the previous three-year period in which 1,826 licenses were issued annually on average. However, many emergency licenses result from additional part-time assignments for a current license holder, and higher numbers of emergency licenses were issued earlier in the decade suggesting that shortages in certain areas have been longstanding."[24] In a Wisconsin Education Association Council survey, more than 38 percent of the responding superintendents reported that state revenue controls have hampered their efforts to hire and retain qualified teachers.[25]

School Readiness

In 1990, President George Bush and all fifty governors set a series of eight national education goals to be achieved by the year 2000. They established the National Education Goals Panel to chart progress. Former Governor Tommy Thompson served on the panel as did Wisconsin State Representative Spencer Coggs who was one of only four state legislators. The first goal stated "...by the year 2000 all children in America will start school ready to learn"; other goals included school completion, citizenship, teacher education and parental participation.

The notion of preparing children for the transition from home to school was not a novel one in 1990, but the requirement that such "school readiness" be operationally defined and quantified did pose new challenges. Since the school readiness goal was announced numerous reports addressing the issue have been published. School readiness has earned a very expansive definition over the years. It has commonly been divided into three categories:

Readiness of the Child

Readiness of the child measures a range of variables that are indicative of the child's ability to learn at school. Although cognitive or academic readiness is an essential aspect, it is only one of five categories used to determine school readiness.

The five areas are:

1) physical,
2) social and emotional,
3) approaches to learning,
4) language development,
5) cognition and general knowledge.

Readiness of the School

In 1998, the National Education Goals Panel put forth ten guidelines for characteristics of ready schools. Included are strategies that provide for transitions between home and school and continuity between early care and education programs and schools.

Family and Community Support for Child Readiness

Family and community supports for child readiness include: access to high quality and developmentally appropriate childcare and preschool programs, parental supports to enhance their effectiveness at teaching their children, and access to services to meet the basic physical needs of children.[26]

Since nearly half of the nation's children entering kindergarten come from families with at least one risk factor for childhood educational disadvantage, family and community supports such as high quality early childhood programs are invaluable. Risk factors threatening a child's educational success include: low-income, single-parent, parents not completing high school, and speaking a language other than English in the home.[27]

Introduction

High Quality Early Childcare and Education

Quality must promote the development of a range of children's skills: cognitive, language, social, and emotional. It must also foster a child's physical health and well-being. Equally important is contact between parents and their child's teachers.28 We know from longitudinal studies such as the Perry Preschool Project and the Abecedarian Project that children in high quality childcare programs reap tremendous benefits later in life. They have higher rates of graduation, college attendance, and employment. However, quality early education is highly dependent on trained teachers who are well-paid.

Head Start is a nationally renowned preschool program, which seeks to provide high quality childcare to low-income children and families. Since 1965, Head Start has attempted to "break the cycle of poverty by improving health, social competence, and school readiness of preschool children and by promoting economic self-sufficiency for parents."[29]

In 1995, the 35-year-old Head Start program was expanded to include children from birth to three years of age. Titled Early Head Start, it involves one of two approaches: caring for children in high quality childcare centers or sending child development experts to the children's homes on a weekly basis. Both techniques place an emphasis on helping parents to become their own children's best teachers. A study conducted on two-year-olds in Early Head Start found that children in the program displayed increased abilities in problem solving, language use, and attention spans. They were also less likely to cause trouble than their peers.[30]

Four-year-old kindergarten is another form of high quality early education that prepares children for academic and social success. In Wisconsin, such publicly funded programs have been discussed only in the context of much debate, especially during the recent budget negotiations for the 2001-03 biennium. During the 1999-2000 academic year, there were slightly over 12,000 four-year-olds (17 percent of the state's four-year-old population) enrolled in public school kindergarten and another 12,000, or 17 percent, enrolled in nonpublic four-year-old kindergarten.[31] During the 2000-01 academic year, the number of students enrolled in public four-year-old kindergarten rose to nearly 13,000, with 133 of Wisconsin's 426 school districts offering the program.

Of all the four-year-olds throughout Wisconsin, it is estimated that only 17 percent are at home with a parent, relative, or occasional sitter on a daily basis. The other 83 percent are either in public or private four-year-old kindergarten, Head Start, public Exceptional Education, or other nonpublic preschool or childcare. Over half of these children also need some form of childcare for the other part of the day not accounted for in these programs.[32]

School Breakfast

School breakfast fuels a child's brain, preparing it for a full day of learning and socializing. It sets the tone for the rest of the day, even improving the ability of the body to absorb and use the maximum amount of nutrients consumed thereafter. Children who are hungry do not perform at the level of their well-fed peers. Researchers at the University of California at Davis cite four key areas that suffer when children miss breakfast: aptitude, time on task, attendance, and perseverance.[33]

The federal School Breakfast Program was launched in 1966 as a pilot program, targeting areas where students were more likely to have mothers working outside of the home and where children had long bus rides to school.[34] A study by Boston Medical Center confirms that students who participated in the School Breakfast Program scored higher on achievement tests and had lower rates of tardiness and absenteeism than their peers who did not participate.[35]

Children who eat school breakfast...

- Perform better academically (average of one letter grade increase in math);
- Behave better (less anxiety and depression);
- Have higher attendance rates and lower rates of tardiness.

For children who miss more than their fair share of healthy meals, often as a result of poverty, the long-term effects raise even greater concern. Tufts University's Center on Hunger, Poverty, and Nutrition Policy summarized current research and concluded, "Under-nutrition during any period of childhood can have detrimental effects on the cognitive development of children and their later productivity as adults."[36]

Many children in Wisconsin are at risk for experiencing under-nutrition. In 1998, the poverty rate for children under 18 was 13.6 percent, more than 1 out of 10.[37] According to a recent national study conducted by the USDA, "7.2 percent of all Wisconsin households were considered *food insecure*." Food insecurity applies not only to people who are hungry due to the immediate need, but also to people who are at risk of hunger due to household financial instability. People who are at risk of hunger may have access to food through pantries or other emergency food supplies, but they do not have sufficient income or the income stability to guarantee that they can provide food for themselves and their families on a daily basis. Many of the people at risk for hunger are working families. A recent UW-Extension survey of 4,000-food pantry clients from around the state confirmed that 44 percent of the households did have earned income, but of that 44 percent, 83 percent of the households earned less than $8 per hour.[38] Programs like School Breakfast can help ensure stability in a child's diet.

> The School Breakfast Program operates like the School Lunch Program, which started in 1946 after World War II exposed a large percentage of undernourished American military recruits.[8] Eligibility for free and reduced price breakfast is determined by household income, in the same manner as the School Lunch Program. Children qualify for free breakfast if they are from households earning less than 130% of the federal poverty level, which amounted to $21,710 annually for a family of four during the 1999-2000 school year. Children qualify for reduced price breakfast if their income is less than 180% of the federal poverty level, or $30,895 annually for a family of four during that same year.[10]

In Wisconsin, the School Breakfast Program has not gained the almost universal acceptance accorded the School Lunch Program. In 1999-2000, 95 percent of public schools and 47 percent of private schools participated in school lunch. However, only 37 percent of these schools offered school breakfast. Nationally, 75 percent offer both programs.

For the past five years Wisconsin has ranked dead last nationally in both school participation and low-income student participation in the breakfast program. Yet 26 percent of our students are income eligible for free or reduced price meals. Nationally, 42 percent of low-income children participate in both breakfast and lunch programs, compared with 22 percent in Wisconsin, less then one quarter of eligible children.

In spite of the low ranking, Wisconsin has witnessed some improvement. Since 1990, the number of students receiving free and reduced price breakfasts has nearly doubled.

Between October 1998 and October 1999, the state saw a nine percent increase in the number of low-income students participating in the program. The 2001-03 state budget included an 18.3 percent increase in state funding for the School Breakfast Program for 2001/02 - an increase of $163,000 over the annual base of $892,100. In addition, for the second year in a row, Wisconsin received a federal grant of $500,000 to start school breakfast programs. The 56 schools receiving grants will serve breakfast at 105 buildings and serve approximately 45,000 students.

Small Class Size

The Student Achievement Guarantee in Education (SAGE) program provides funds to schools based on the percentage of low-income children. School districts were eligible to participate in the program if, in the previous school year, at least one school had an enrollment that was at least 50 percent low-income (determined according to Title I criteria, which is usually, but not always, the number of students eligible for free or reduced lunch). Districts also were eligible if one school had at least 30 percent low-income students and the district did not receive a preschool to grade five (P-5) grant for that school. SAGE funds can be used only for the eligible schools in the district. It is important to note that, under current law, school districts that are not receiving SAGE grants can no longer apply for the program, even if they meet the criteria.

The objective of the SAGE program is to improve student achievement through the implementation of four reform strategies:

- reducing class sizes (students in a classroom) to no more than 15:1 for kindergarten through third grade,
- lighted school houses - increasing collaboration between schools and their communities, including before- and after-school activities,
- implementing a rigorous academic curriculum focusing on academic achievement,
- improving professional development and staff evaluation practices.

The politically popular program started in 1996 in 30 schools in 21 districts, encompassing 84 kindergarten classrooms, 96 first grade classrooms, and 5 mixed-grade classrooms enrolling 1,715 kindergarten and 1,899 first grade students.

In 1997-98, 113 second grade classrooms were added in the original 30 SAGE schools. In 1998-99, SAGE was operating in 131 kindergarten, 143 first grade, 143 second grade, and 139 third grade classrooms enrolling 2,303 kindergarten, 2,508 first grade, 2,493 second grade and 2,572 third grade students. This first wave of schools implemented SAGE under legislation enacted in 1995 and 1997.

The legislature authorized a broad expansion of SAGE in 1999 (using nearly the same eligibility criteria), and the program expanded to 566 schools in 241 districts in 2000-2001 at a cost of about $54 million. The 1999 expansion was phased in over several years, with implementation in the second and third grades (430 schools) to begin in the 2001-2002 school year.

A growing body of research including studies of Wisconsin's SAGE program by the University of Wisconsin-Milwaukee and Tennessee's 1990 Lasting Benefits Study, Project STAR demonstrates that significantly reducing class size coupled with increased services for children and families in the early grades can have long-lasting positive affects on student achievement, particularly for children from low-income families. Interviews with teachers and observations of SAGE classrooms revealed four characteristics of small size classes:

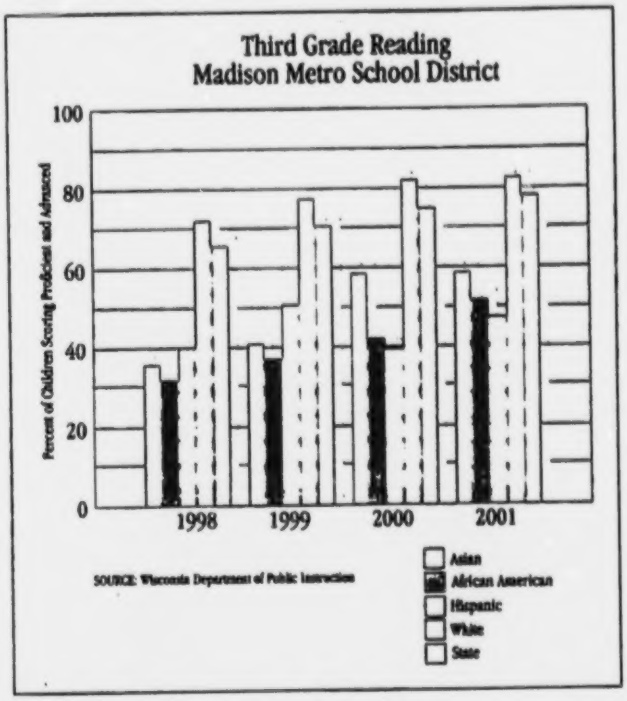
- High levels of classroom efficiency;
- A positive classroom atmosphere;
- Expansive learning opportunities;
- Enthusiasm and achievement among both students and teachers.

Wisconsin students participating in SAGE showed significant improvement over comparison students from the beginning of first grade to the end of third grade across all academic areas. While the gap between African American students and white students remained, gains made by African American compared to white students were significantly larger in SAGE schools from the beginning of first grade to the end of third grade.

A recent study by the University of New York, Buffalo concluded that students who benefit from small class size in the early grades maintain an academic edge through 12th grade. In new findings from Tennessee's STAR program, students who spent their first four years in small classes continue to out-perform their peers in larger classes all the way through 11th and 12th grade. These benefits were two to three times greater for minority students than for white students, significantly reducing the black-white achievement gap.[39]

From Research to Reality - Implementing What Works

Since 1998, the achievement gap between students of color and white students has closed dramatically for third grade students in the Madison Metropolitan School District. As measured by the Third Grade Reading Scores, African American students have made significant gains, increasing from 31 percent of students scoring proficient or advanced in 1998 to 52 percent in 2001. In addition, the number of African American third-graders testing in the minimal range decreased by almost 50 percent from 16 percent in 1998 to nine percent on the 2001 test.



Third Grade Reading
Madison Metro School District

SOURCE: Wisconsin Department of Public Instruction

The gains can be attributed to:

1) smaller class sizes made possible by the SAGE,
2) district investment in staff development, both in schools and in the childcare community, and
3) an extensive community initiative that brought many volunteer tutors into the buildings.

For the last five years the school district has held summer institutes for teachers and provided targeted training materials and continuing education opportunities throughout the year. Using funds from a federal Safe Schools/Healthy Students grant, the school district is providing childcare and preschool educators with early literacy strategies. In addition, the "Gateways to Literacy" project in 10 schools provides a halftime reading coach for teachers. And finally, the district is involved with a community effort through "Schools of Hope" - a United Way of Dane County, *Wisconsin State Journal* and WISC-TV project that recruits and trains volunteers in schools to read to children and listen to them read. The Madison School District also is a member of the Minority Student Achievement Network, a group of 19 similar school districts from throughout the country that is developing strategies to close the achievement gap. Madison is the only district in the network to see appreciable gains in minority student achievement.

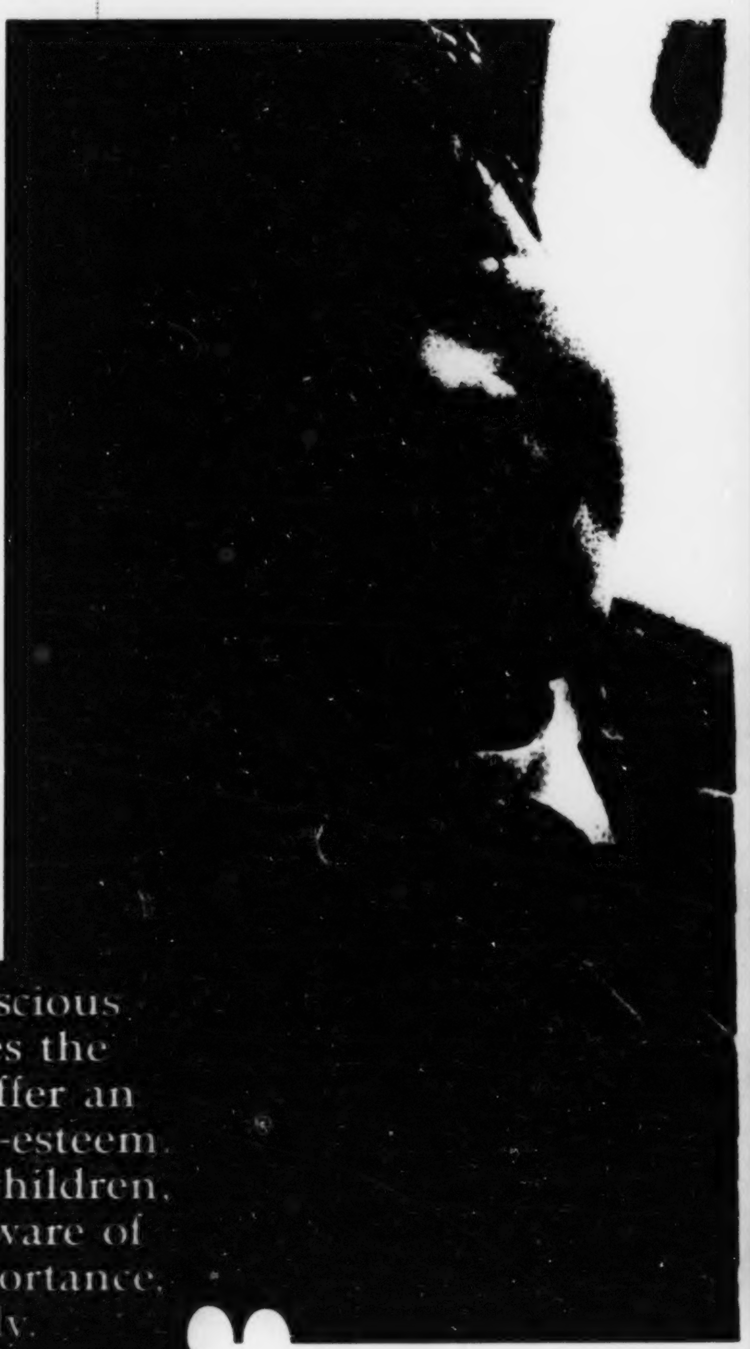
SECTION FOUR

220

Selected Indicators by County

For the past eight years, WisKids Count Data books have included many indicators of child health and well-being by county. Previous books display data from 1991 to 1998 in order for readers to follow trends at the county level. In the data section of this edition we have departed from the standard format and provided primarily school related data. However, in the following section, we have displayed data for a number of indicators used in earlier books. This allows readers to follow participation trends for Wisconsin's children and families in several health and benefit programs.

As always, readers should exercise the usual caution when making inter-county comparisons or when comparing particular counties with the state. Differences may be the result of a particular phenomenon in an individual county. In addition, when looking at trends in data, caution must be used when drawing conclusions from a relatively small number of incidents.



> Every act of conscious learning requires the willingness to suffer an injury to one's self-esteem. That is why little children, before they are aware of their own self-importance, learn so easily.
>
> *Thomas Szasz (1920)*

SECTION FIVE

Definitions and Sources

COUNTY INFORMATION

State and County Total Population:
Data for selected years are from the U.S. Bureau of the Census, Populations Estimates Program. *www.census.gov/populatfon/estimates/county*

Median Family Income:
Data for selected years are from the Department of Housing and Urban Development. *www.huduser.org*

Single Parent Families:
The percent of all families that are headed by a single parent. Data are from the 2000 Census, U.S Bureau of the Census. *www.census.gov*

Births to Mothers Under Age 20 (%):
Age of the mother is noted on Wisconsin birth certificates. Data are from *Maternal and Child Health-Wisconsin Statistics* (selected years), and *Wisconsin Births and Infant Death* (selected years), Wisconsin Department of Health and Family Services, Division of Health, Center for Health Statistics. The percentages were developed using the number of all births as the denominator.

Child Abuse and Neglect Substantiations (per 1,000):
Data are from *Wisconsin Child Abuse and Neglect Reports: Annual Reports* (selected years), Wisconsin Department of Health and Family Services, Division of Children and Family Services, Bureau of Programs and Policies.

School Children Meeting Immunization Requirements (%):
Data are reported for the beginning of each school year. These data come from (1) *Public Health Profiles - Wisconsin* (selected years), Wisconsin Department of Health and Family Services, Division of Health, Center for Health Statistics and (2) *School Assessment Data by County*, Wisconsin Department of Health and Social Services, Bureau of Public Health, Immunization Program.

Food Stamp Recipients (per 1,000 residents):
Reported data are from unpublished reports provided by the Wisconsin Department of Workforce Development, Bureau of Welfare Initiatives. Rates were developed using the estimated population. The state total includes recipients who received benefits from Tribal agencies.

Total Juvenile Arrests (per 1,000 children):
Arrest data are from *Crime and Arrests* (selected years), Wisconsin Office of Justice Assistance, Statistical Analysis Center. Rates were developed using the estimated child population for each year. The Office of Justice Assistance provided child population estimates.

SCHOOL DISTRICT INFORMATION

School District Name Changes - Between the 1993-94 school year and the 1999-00 school year several districts consolidated or changed their names. The data pages list school districts by their name during the 1999-00 school year.

Enrollment by Race/Ethnicity:
Data from the unpublished reports, Wisconsin Department of Public Instruction.

Important Note: Department of Public Instruction has developed several new revenue and cost "benchmarks" for informational and general analysis purposes. The new measures were implemented in the 1999-00 school year. "The old School Performance Report definition was restricted to General Fund (Fund 10) expenditures. The new cost definition is broader, encompassing special education and other costs that were previously excluded." These measures cannot be compared with previous Complete Annual School Costs (CASC) reports prior to 1999. Therefore we have chosen not to display total cost for students and instructional cost per student for the 1993/94 school year.

Instructional Costs per Pupil (Current Educational Cost):
Costs are from un-audited school district annual reports. This measure attempts to identify overall instructional and instructional support service costs attributable to district residents. It can generally be described as the cost of the district's General and Special Project funds, excluding transportation and facility acquisition expenditures, less inter-fnd transfers and revenues for instructional services the district provides to non-resident pupils such as tuition receipts, CESA and cooperative agreements, and state inter-district integration aid. Wisconsin Department of Public Instruction, *www.dpi.state.wi.us*

Total Costs per Pupil (Total Education Cost):
Total Education Cost is the Current Educational Cost plus transportation, expenditures for facility acquisitions charged to the General, Special Project, and Capital Expansion (Tax Levy Financed "Sinking") funds, and debt service principal and interest. Wisconsin Department of Public Instruction, *www.dpi.state.wi.us*

Property Tax Levy per Pupil:
Total property tax levy for each school district divided by the number of pupils in the district. Data from the Department of Public Instruction, 1999-00 Revenues by District.

State Aid Per Student:
Shown is the total aid provided to each school district for the school years 1993-94 and 1999-00 divided by the general aid membership in that district in each year. Department of Public Instruction, 1999-00 Revenues by District.

Starting Teacher Salary:
Data from the Wisconsin Education Association Council (WEAC), 1993-94 and 1999-00.

Students in Special Education Programs:
Students with disabilities are the number of students identified on the December 1 Federal Child Count as being students with disabilities for whom the district has educational responsibility. The percentage of students with disabilities was determined by dividing the total number of students with disabilities by the total public and private enrollment for the district. Enrollment Reports, Department of Public Instruction; *www2.dpi.state.wi.us/leareports/*

School Lunch Data:
Percentages for school lunch eligibility for the 1999-00 school year were gathered from an October 2000 unpublished report from the Wisconsin Department of Public Instruction, Bureau for Food and Nutritional Services. The comparison data for 1993-94 lunch eligibility was taken from the June 1994 report (before the now standard October date was used). These numbers may be slightly different than the ones printed in the *1996 WisKids Count Data Book*. Eligibility for both free and reduced-price lunch is determined by an application process in which students or their parents show annual household income to be at or below 185 percent of the federal poverty line. Students from households earning between 130-185 percent of the poverty line ($21,710-$30,895 for a four-person household in 1999-2000) qualify for reduced-price meals. Students from households below 130 percent of poverty qualify for free meals.

School lunch eligibility is the best measurement available to estimate the percentage of low-income children in each school district. A limitation to these percentages is that there are an unknown number of students who do not apply for the program, but who would otherwise be eligible. Therefore, percentages of eligible students may underestimate the actual percentage of low-income students in each district.

227

Definitions and Sources

School Breakfast Data:
Percentages for school breakfast participation were gathered from an unpublished report from the Wisconsin Department of Public Instruction, Bureau for Food and Nutritional Services. The data was collected in October 2000. In order to become eligible for free or reduced breakfast, students or their parents must apply for the program and show that annual income is 185 percent or less of the federal poverty line, which amounted to $30,895 for a 4-person family in 1999. The school breakfast data indicate the percentage of eligible students who actually receive free or reduced breakfast on any given day. The percentages were derived by dividing the Average Daily Participation (ADP) of students receiving free or reduced breakfast by the number of students eligible for free or reduced breakfast in each district. A limitation to these percentages is that there are an unknown number of students who do not apply for the program, but who would otherwise be eligible. Therefore, these percentages may overestimate the actual percentage of low-income children who receive free or reduced breakfast.

Student Attending Private School (%):
Private school enrollment represents the number of children attending private schools within the district's boundaries. These children may or may not be residents of the district. Rates were developed using all school age children in the district as the denominator. Data from unpublished reports by the Department of Public Instruction.

Students in Home School Settings (%):
Percent of students in the district that are receiving home school instruction. Rates were developed using all school age children in the district as the denominator. Data from unpublished reports by the Department of Public Instruction.

Third Grade Wisconsin Reading Comprehension Test (WRCT):
The Department of Public Instruction's Office of Educational Accountability compiled results for the March 2000 third grade reading comprehension test. Student results are reported in four categories: minimal, basic, proficient, and advanced. Expressed are the percentages of enrolled students tested and the percentages of those students who scored "proficient" or "advanced."

Fourth, Eighth & Tenth Grade Wisconsin Knowledge and Concepts Exam (WKCE):
The Department of Public Instruction's Office of Educational Accountability provided test scores for the fourth grade achievement test. Students were tested in five subject areas: reading, language arts, mathematics, science, and social studies. For each subject, student scores are reported by one of four proficiency levels: minimal, basic, proficient, and advanced. The 1999-00 reading, math, and science scores are reported as a percentage of eligible students testing at the proficiency level or above. The percentage of enrolled students eligible for each of the three subject exams are shown as well as the percentages of those eligible students who scored "proficient" or "advanced."

Notes Regarding Fourth, Eighth, and Tenth Grade WKCE:
Most districts reported their scores based on the students who were in that district for the full academic year prior to testing, noted "District FAY." Where this information was not available, the districts scores show an average based on students in the district at the time of testing, noted "Students in This District." If neither of the two above categories were complete, the category of "Students in Single (This) School FAY" was used to report scores. Using this category, only students who were in that particular school for the full prior academic year were reported. In almost all cases, though, these were districts with only one school and for the handful that had two or more, the scores from schools within the district had been included.

ACT Test:
The Office of Educational Accountability within the Department of Public Instruction provided 1999-00 ACT scores. Seniors from the graduating class of 2000 who took the test are reported as a percentage of enrolled seniors for each district. Of those seniors tested, an average composite score is also reported for each district. The ACT is comprised of four sections: English, science, reading and math. Each section is worth a maximum of 36 points and is averaged together for a composite score. Composite scores for all tested seniors in each district were then averaged to create a district average composite score.

SELECTED INDICATORS BY COUNTY

Fair Market Rent:
Data for selected years are from the US Department of Housing and Urban Development. Web address: *www.huduser.org*. FMRs are gross rent estimates; they include shelter rent and the cost of utilities, except telephone. The level at which FMRs are set is expressed as a percentile point within the rent distribution of standard quality rental housing units. The current definition used is the 40th percentile rent, the dollar amount below which 40 percent of standard quality rental housing units rent. The 40th percentile rent is drawn from the distribution of rents of units, which are occupied by recent movers (renter households who moved into their unit within the past 15 months). Newly built units less than two years old are excluded and adjustments have been made to correct for the below market rents of public housing units included in the data base.

Full Time Hourly Wage needed as 30% of Income:
This indicator attempts to show the amount of hourly wage a full-time worker would need to make in a specific county to keep their housing costs at 30 percent of their income, the generally accepted standard for affordability established by Congress and HUD. This dollar amount calculation was based on a 40-hour work week for 50 weeks of the year.

Children Receiving WIC Services Under Age 5 (per 1,000 children):
Program data are reported by categories. The following categories were included in this report: breast-fed infants 0 - 12 months, nonbreast-fed infants 0 - 12 months, child age 1, child age 2, child age 3, and child age 4. These data are from unpublished reports, Wisconsin Department of Health and Family Services, Wisconsin WIC Program. Rates were developed using the estimated population of children from birth up to and including children age 4. Note: The total for the counties does not equal the statewide total because some people were counted more than once during the fiscal year due to the fact that they lived in more than one county during that year. However, the state total is an unduplicated count. Rates in some counties may be higher because of mobility and because some service areas are larger than the county.

Births to Unmarried Mothers (%):
Marital status of the mother is noted on Wisconsin birth certificates. Data on live births are from *Maternal and Child Health - Wisconsin Statistics* and *Wisconsin Births and Infant Deaths*, Wisconsin Department of Health and Family Services, Division of Health, Center for Health Statistics.

Infant Deaths (per 1,000 live births):
Infant deaths include all deaths, regardless of cause, for children under age one. Data are from *Maternal and Child Health - Wisconsin Statistics* and *Wisconsin Births and Infant Deaths*, Wisconsin Department of Health and Family Services, Division of Health, Center for Health Statistics. Total births (to calculate the rate) are from the same sources.

Children in Families with W-2 Paid Placements (per 1,000 children):
Data are from reports from the Wisconsin Department of Workforce Development, Bureau of Welfare Initiatives. DWD defines several categories of W-2 placements as "Unsubsidized Employment."

Caretaker Supplement (C-Supp) (per 1,000 children):
Data are from unpublished reports provided by the Wisconsin Department of Health and Family Services, Division of Supportive Living. Rates were developed using the estimated child population.

Kinship Care (per 1,000 children):
Data provided by the Department of Health and Family Services, Division of Supportive Living.

Child Medicaid Recipients (per 1,000 children):
These data provide a snapshot of Medicaid eligibility as of December 31. Data provided by the Wisconsin Department of Health and Family Services, Division of Health. Rates were developed using the estimated child population for each year. State totals include recipients whose eligibility may have been determined by an agency other than the county (tribal agencies). Therefore, the state total is larger that the cumulative county totals.

Disabled Child Supplemental Security Income Recipients (per 1,000 children):
Rates are based on point-in-time counts of child SSI recipients as of June 30. Data provided by the Department of Health and Family Services, Division of Supportive Living. Figures reflect the effect of a 1991 U.S. Supreme Court decision that made childhood disability conditions more likely to meet SSI disability standards. Rates were developed using the estimated child population.

Children Participating In Birth-to-Three Program (per 1,000 children):
This program provides services for children from birth up to their third birthday. Transitional services are available for some 3- year-olds, but they are not included in program participation counts. These are unpublished data from the Wisconsin Department of Health and Family Services, Bureau of Developmental Disabilities, Birth-to-Three Program. Rates were developed using the estimated population of children ages 0 to 3.

Healthy Start Recipients (per 1,000 children):
The Wisconsin Department of Health and Family Services, Division of Health, Bureau of Public Health provided unpublished data. Rates were calculated using the child population.

Domestic violence instances were children are present (per 1,000 children):
Data are from Domestic Abuse Incident Reports, Wisconsin Department of Justice, Office of Crime Victim Services. Note: Milwaukee County does not provide dual arrest data or report the presence of children.

2001 Federal Poverty Levels:

	ANNUAL INCOME					
Groups Size	100%	115%	130%	150%	185%	200%
One	$8,590	$9,879	$11,167	$12,885	$15,892	$17,180
Two	$11,610	$13,352	$15,093	$17,415	$21,479	$23,220
Three	$14,630	$16,825	$19,019	$21,945	$27,066	$29,260
Four	$17,650	$20,298	$22,945	$26,475	$32,653	$35,300
Five	$20,670	$23,771	$26,871	$31,005	$38,240	$41,340
Six	$23,690	$27,244	$30,797	$35,535	$43,827	$47,380

For each additional person, add $3,020/yr. for families at 100% of poverty.

Note:
- 115% is the maximum income level for participation in W-2 cash assistance
- 130% is the maximum income for food stamps & free school lunch and breakfast
- 150% is the income level at which co-payment is required for BadgerCare
- 185% is the maximum income level for eligibility for childcare, Healthy Start, Badger Care* and reduced school breakfast and lunch

*200% is the maximum income level for eligibility for childcare and BadgerCare for families that qualify initially at 185% of poverty.

WISCONSIN COUNCIL ON CHILDREN & FAMILIES

An Informed Vision • A Trusted Voice

The Wisconsin Council on Children and Families serves as Wisconsin's leading voice of and premiere advocate for children throughout the state.

Emphasizing the core values of fairness, caring, and community, the Council conducts a variety of advocacy activities, including organizing expert research, educating the public, supporting key issues and legislation, and coordinating grassroots activity in communities all across Wisconsin.

In addition to publishing the *Wiskids Count Data Book* – which seeks to enrich local, state, and national discussions concerning ways to secure better futures for all children – the Council accomplishes its advocacy through several publications; educational conferences throughout the state; and key projects like the Better Badger Baby Bus Tour, W-2 Watch, the Wisconsin Budget Project, and Advocacy Camp, among others.

www.wccf.org

MISSION STATEMENT

The Wisconsin Council on Children and Families is a statewide, multi-issue child advocacy organization. It works to improve the well being of children and families by advocating for effective health, education, justice and human service programs that are accessible and equitable for children.

> *"There are two lasting bequests we can give our children. One is roots. the other is wings."*
